

MOBILE TELEPHONES RADIO JAMMER MTJ™VIP-100

MTJ™VIP-100 is a multichannel jammer for interfering cell and satellite mobile telephones. The suppressed devices lose their synchronization with the network. The resulting effect for the jammed device and for those who are trying to connect it is a lack of connection.

MTJ™VIP-100 emits scanning interference in several frequency ranges corresponding to the channels of the main station - subscriber. It covers the whole committed waveband with no possibilities of ignoring the jamming.

The device may be used in cinemas, theatres, concert halls, libraries, churches, etc., as well as for more special cases – for signal suppression in a definite region by the government authorities, for protection against phone – tapping and recording of conversations by a deliberately left open mobile telephone line.

It is produced according to an original technology, license No 108778 / 29.06.2004

TECHNICAL DATA

Frequency range	NMT 450; GSM800/900; GSM1800/1900; 3G; Satellite (1520÷1670) MHz; satellite (2400÷2500) MHz
Subranges	up to 6
Output power	≥ 90 W
Interference type	Fast Random Scanning (FRS)
Interference kind	barrage
Power supply	11÷15V (DC); 95 ÷ 265V/50Hz (AC)
Temperature range	-30/+55 °C
Weight (Device unit and Power supply system)	≤ 31 (18 + 13) kg
Protection area (reference data)	> 400 m ²

COMPLETE SET

1.	Stationary radio jammer type MTJ™VIP-100	1 set
2.	Power supply network cable	1 unit
4.	Safety fuse	1 unit
5.	Remote control device (optional)	1 unit
6.	Remote control device cable (optional)	50m
7.	User's manual	1 unit.
8.	Antennas	1 set

TRANSPORTATION

The radio jammer **MTJ™VIP-100** can be transported with all kinds of transportation. It must be well adjusted in the transportation vehicle.
